Open to remote B2B contracts · available in 2 weeks · EU and APAC time zones

SUMMARY

Fullstack engineer with 6 years of commercial experience in the Vue/React and Node.js ecosystems, plus hands-on work with Go services. I take features from requirements to production: API and schema design, frontend architecture, CI/CD, and production troubleshooting.

Currently leading a Vue 2 → Vue 3 migration with strict TypeScript on a high-load product-marking platform. I work comfortably in existing and legacy codebases — typical onboarding to an unfamiliar module takes about three days.

SELECTED RESULTS

- Led a production frontend migration from Vue 2 (Options API) to Vue 3 (Composition API) with strict TypeScript, introducing shared conventions and a reusable component layer.
- Improved initial page load on data-heavy screens by roughly 10–15% through Vite code splitting and custom table virtualization, measured before and after.
- Rebuilt CI/CD on TeamCity across several projects: replaced manual deployments with an automated pipeline, reducing a full build-and-deploy from tens of minutes of manual work to about 12 minutes.
- Fixed 100+ defects in a legacy Vue 2 / PHP product — rendering errors, slow screens, stale and incorrect data.
- Delivered features and bug fixes in existing Go services handling high-load data streams.

EXPERIENCE

T1 Group — Senior Fullstack Developer

March 2026 – present · Product-marking and digital workflow platform (enterprise B2B, high-load)

- Own frontend functionality end to end: requirements, implementation, review, release.
- Lead the Vue 2 → Vue 3 migration and expand strict TypeScript coverage across the codebase.
- Improve performance on data-heavy tables and screens.
- Work in Go microservices: isolated modules and bug fixes.
- Use an AI-assisted workflow (OpenCode) for codebase exploration, implementation support, testing and review, while keeping architecture decisions and code review in my own hands.

`Vue 2/3 · TypeScript · Pinia · Vite · Go · Docker`

APPFOX — Fullstack Developer

November 2024 – March 2026 · Web development studio building client products

- Built client-facing applications from scratch as the main fullstack engineer on several projects.
- **SkinsDojo** — CS:GO skin trading platform acting as an intermediary between users and automated trade bots. Backend: ~10 NestJS microservices (authorization, API gateway, trading, Steam integration, bot management).
- Built the dynamic filtering UI and parts of the Steam API integration.
- Set up TeamCity CI/CD for several projects, replacing manual deployments.
- Took over a legacy Vue 2 / PHP project, rewrote parts of the frontend and fixed 100+ bugs.
- Deployed applications to client servers and resolved delivery issues on site.
- Integrated Unity WebGL components into web applications.

`Vue 2/3 · React · Node.js · NestJS · PHP · Steam API · Docker · TeamCity`

Stealth-mode startup (NDA) — Full Stack Engineer

January 2021 – November 2024 · B2B SaaS, fintech, real-time transaction processing

- Core fullstack developer from early MVP to a production platform.
- Built REST APIs, transactional backend modules and admin panels on Node.js (NestJS, Express) with JWT-based authorization.

- Moved complex layouts to a component-based architecture and built a shared UI library reused across product areas.
- Scaled product functionality as the business grew from MVP to an enterprise-ready platform.

`Vue/React · Node.js · NestJS · Express · PostgreSQL · Redis`

SKILLS

Frontend — Vue 3 (Composition API), Vue 2, React, TypeScript, JavaScript, Pinia, Vuex, Redux Toolkit, Vite, Webpack, HTML5, CSS3, SCSS, Tailwind CSS, Vue Router, React Router, Next.js, Nuxt 3

Backend — Node.js, NestJS, Express, Fastify, Go (maintenance and small features), REST API, GraphQL, WebSocket, SSE, JWT, OAuth 2.0, Microservices

Data & messaging — PostgreSQL, MySQL, MongoDB, Redis, Kafka, RabbitMQ, Elasticsearch

Infrastructure & testing — Docker, Docker Compose, Kubernetes, TeamCity, CI/CD, GitHub Actions, GitLab CI, Vitest, Jest, Cypress, Playwright, Storybook, Nginx, Linux, AWS, GCP

Workflow — AI-assisted development with OpenCode: project rules, review and testing steps, used as a delivery accelerator. Agile, Scrum, Kanban, Jira, Confluence

Additional — Git, GitHub, GitLab, Bitbucket, REST API, GraphQL, WebSocket, gRPC, Microservices, Clean Architecture, Monorepo, Vite, Webpack, Rollup, esbuild, Tailwind CSS, SCSS, Less, Material UI, Ant Design, Figma (basic)

EDUCATION

Perm State University — BSc, Computer Software Engineering, 2006–2012

LANGUAGES

English — B2 (Upper-Intermediate): daily written communication, comfortable in technical discussions and interviews. Russian — native.
